The products of the invention have antidiabetic and ancrectic activity. The non-human transgenic animals are cuseful as models for the investigation of lipid and glucose metabolism, comercy homeostasis and associated diseases. The transgenic animals are calso useful for selection and identification of modulators of the expression and/or activity of 4E-BP1 and for screening drugs to isolate therapeutic agents which are useful as anti-obesity, anti-fat deposition conditions and anti-metabolic diseases associated with fat deposition disorders. The effect of the disruption of 4E-BP1 in the concept and activity of 4E-BP1 and for screening drugs to isolate the deposition disorders. The effect of the disruption of 4E-BP1 in the concept and activity of 4E-BP1 and for screening drugs to isolate the deposition disorders. The effect of the disruption of 4E-BP1 in the concept and the discussion of 4E-BP1 and an animal the concept and the discussion of 4E-BP1 and an animal transcription of 4E-BP1 and animal the concept and animal a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         protein 1) shows a phenotype of an altered glucose and/or fat metabolism when compared to a control animal. The products of the invention have antidiabetic and anorectic activity. The non-human transgenic animals are useful as models for the investigation of lipid and glucose metabolism, energy homeostasis and associated diseases. The transgenic animals are also useful for selection and identification of modulators of the expression and/or activity of 4E-BP1 and for screening drugs to isolate therapeutic agents which are useful as anti-obesity, anti-fat deposition disorder, anti-diabetes and anti-metabolic diseases associated with fat deposition disorders. The effect of the disruption of 4E-BP1 in the knockout mice demonstrates that an alteration of 4E-BP1 can modulate fat tissue growth, glucose metabolism and weight gain in an animal. This invention of germ cells and of a 4E-BP1 (a mem)

ion describes a novel non-human transgenic animal (I) whose and somatic cells contain a knockout mutation in DNA encoding member of eukaryotic initiation factor 4E (eIF-4E)-binding

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               protein 1) shows a phenotype of an altered glucose and/or fat metabolism when compared to a control animal. The products of the invention have antidiabetic and anorectic activity. The non-human transgenic animals are useful as models for the investigation of lipid and glucose metabolism, energy homeostasis and associated diseases. The transgenic animals are also useful for selection and identification of modulators of the expression and/or activity of 4E-BP1 and for screening drugs to isolate therapeutic agents which are useful as anti-obesity, anti-fat deposition disorder, anti-diabetes and anti-metabolic diseases associated with fat deposition disorders. The effect of the disruption of 4E-BP1 in the knockout mice demonstrates that an alteration of 4E-BP1 can modulate fat tissue growth, glucose metabolism and weight gain in an animal
AAB84401-15 represent 4E-binding sites. 4E-binding protein 1 (4E-BP1) is a repressor of cap-dependent translation initiation, and selectively activates apoptosis in Ras-transformed fibroblasts and eliminates Ras-induced chemoresistance. The effects of 4E-BP1 are strictly dependent on its ability to sequester the translation initiation factor elf4E, thereby preventing its assembly into an active pre-initiation complex. The specification describes a method for inducing apoptosis in a cell in which the apoptosis pathway is inhibited. The method comprises decreasing the amount of elf4F pre-initiation complex by sequestration of elf4E, thus relieving an apoptosis block. The method is useful for modulating
                                                                                                                                                                                                                                                         Inducing apoptosis in useful for treating cadecreasing the amount apoptosis block.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          4E-binding site; 4E-binding protein; 4E-BP, cap-dependent translation initiation represtranslation initiation factor; elF4E; Ras;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     នន្តន្តន្តន្ត្
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                       AABB4401-15 represent 4E-binding sites. 4E-binding protein 1 (4E-BP1) is a repressor of cap-dependent translation initiation, and selectively activates apoptosis in Ras-transformed fibroblasts and eliminates Ras-induced chemoresistance. The effects of 4E-BP1 are strictly dependent on its ability to sequester the translation initiation factor elf4E, thereby preventing its assembly into an active pre-initiation complex. The specification describes a method for inducing apoptosis in a cell in which the apoptosis pathway is inhibited. The method comprises decreasing the amount of elf4F pre-initiation complex by sequestration of elf4E, thus relieving an apoptosis block. The method is useful for modulating pro-apoptotic and anti-apoptotic pathways in cells, especially in Rastransformed cells. Thus, the method aparticularly useful for treating cancer. The elf4E sequestering agent, 4E-BP1 or its elf4E binding portion is useful for treating high proliferative cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   pro-apoptotic and anti-apoptotic pathways in cells, especially in Rastransformed cells. Thus, the method is particularly useful for treating cancer. The elf4E sequestering agent, 4E-BP1 or its elf4E binding portion is useful for treating high proliferative cells.                                                                                                                                         AABB4401-15 represent 4E-binding sites. 4E-binding protein 1 (4E-BP1) is a repressor of cap-dependent translation initiation, and selectively cactivates apoptosis in Ras-transformed fibroblasts and eliminates Ras-induced chemoresistance. The effects of 4E-BP1 are strictly dependent on its ability to sequester the translation initiation factor elf4E, thereby preventing its assembly into an active pre-initiation complex. The specification describes a method for inducing apoptosis in a cell in specification describes a method for inducing apoptosis in a cell in which the apoptosis pathway is inhibited. The method comprises decreasing the amount of elf4F pre-initiation complex by sequestration of elf4E, thus relieving an apoptosis block. The method is useful for modulating pro-apoptotic and anti-apoptotic pathways in cells, especially in Ras-transformed cells. Thus, the method is particularly useful for treating cancer. The elf4E sequestering agent, 4E-BP1 or its elf4E binding portion is useful for treating high proliferative cells

The specification describes eIF4G and eIF4E binding agents, such as peptides or peptidemimetics. These binding agents are used for the induction of cell death. The binding peptides are used for inducing cell apoptosis. They are used in pharmaceutical compositions for anticancer or antitumor treatment of mammalian cells. Specifically, the peptides result in growth inhibition of, or increased cytotoxicity to tumour cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Use of eukaryotic Initiation Factor 4E (elF4E) binding agents e.g. elF4E-binding peptide (elF4E-BP) derivatives as anticancer or antitumor agents for inducing apoptosis in e.g. mammalian tumor cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Binding peptide;
cell death; cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Peptide derived from human eukaryotic Initiation Factor 4G (eIF4G).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        20-APR-2001

                                                                                                                                                                                                                                                                                                                                                                                                                            5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention relates to novel, isolated full length human cDNA complexities and the encoded proteins thereof. Specifically, it refers to convert the encoded proteins thereof. Specifically, it refers to convert the encoded proteins thereof. Specifically, it refers to convert the encoded by an oligo-capping method, where none of these colones are identical to any known human mRNAs. The present invention converted to any known human mRNAs. The present invention converted to any known human mRNAs. The present invention converted to any known human mRNAs. The present invention converted to any known human mRNAs. The present invention as well as the used to bind to any known the cDNA molecules as such, these converted to any known the cDNA molecules. As such, these for the various diseases or morbid states. In particular, they are useful in the various disease or morbid states. In particular, they are useful in the therapy for treating osteoporosis, neurological disease, Alzhaimer's converted the sequence of sense or motor function, and they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian, constant and tranquiliser activities. This polypeptide is a protein encoded by a full length human cDNA sequence of the invention. NOTE: This sequence is not given in the sequence listing of the specification but office, because of the specification but office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

that is differentially expressed in neuronal tissue of a first animal considered to pain, a method for identifying a compound which regulates the expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a cc method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the cs specification, a method for identifying a compound useful in treating cs pain and a pharmaceutical composition composition the one or more polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating capin (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene the sequence presented is a human protein (shown in Table 2 of the sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at

Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence

The present invention describes an isolated PRO nucleic acid (I). Also clearibed: (I) a vector comprising (I); (2) a host cell comprising the creator of (I); (3) a process for producing a PRO polypeptides; (4) an cisolated PRO polypeptide; (5) a chimeric molecule comprising the composition of polypeptide; (5) a chimeric molecule comprising the composition of matter comprising a polypeptide of (4); (7) a composition of matter comprising a polypeptide of (4), an agonist or composition of the polypeptide or an antibody that binds to the polypeptide in combination with a carrier; (8) an article of manufacture polypeptide in combination with a carrier; (8) an article of manufacture comprising a container, a label on the container and a composition of comprising a method of treating an immune related disease in a mammal; (10) a method of treating an immune related disease in a sample suspected of having the polypeptide; (11) a method of cidentifying a compound that inhibits or composing an immune related disease or an inflammatory immune response companding an immune related disease or an inflammatory immune response companding an extinct of a gene encoding a PRO polypeptide companding an immune response in a mammal; (12) a method of identifying a compound that inhibits or companding an extinct of a gene encoding a PRO polypeptide companding an extinct of a gene encoding a PRO polypeptide companding an extinct of a gene encoding a PRO polypeptide companding an extinct of a gene encoding a PRO polypeptide companding an extinct of a gene encoding a PRO polypeptide companding an encoded polypeptide, compositions, kits and methods are compositions, kits and methods are consecuted to useful in diagnosing and treating an immune related disease and in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 1; SEQ ID NO 707; 3009pp; English.

                                                                                                                                                                                                                                            The present sequence represents the human ribosome recruitment protein elF4G1. The protein is used for the translational activation of genes. The elF4G1 protein is an RNA-binding protein. The protein is also used for the translation of RNA molecules containing protein binding sites, identifying RNA-binding proteins, protein-protein interactions, or inhibitors or enhancers of the interactions, providing a cell or subject with therapeutic proteins, controlling the levels of translation of the therapeutic proteins, controlling the translation and stockhometry of multiple subunit proteins, screening proteins that interact with an RNA binding site, and identifying the RNA binding sites
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid encoding an RNA with a coding region and protein binding sites in an adjacent 5' non-coding region for translational activation of genes using the ribosome recruitment protein eIF4G.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DB 08

Binding peptide; cell death; cell

A wheat eukaryotic Initiation Factor 4G (eIF4G) binding peptide

eukaryotic Initiation Factor 4G; eIF4G; eIF4E; apoptosis; anticancer; antitumor.

20-APR-2001 (first entry)

AAB31439;

```
The present sequence represents a binding peptide for an eukaryotic Initiation Factor 4G (eIF4G) protein. The specification describes eIF4G and eIF4E binding agents, such as peptides or peptidemimetries. These binding agents are used for the induction of cell death. The binding peptides are used for inducing cell apoptosis. They are used in pharmaceutical compositions for anticancer or antitumor treatment of mammalian cells. Specifically, the peptides result in growth inhibition of, or increased cytotoxicity to tumour cells
                                                                                                                                                   Claim 6; Page 31; 46pp; English.
                                                                                                                                                                           Use of eukaryotic Initiation Factor 4E (elF4E) binding agents e.g. elF4E-binding peptide (elF4E-BP) derivatives as anticancer or antitumor agents for inducing apoptosis in e.g. mammalian tumor cells.
                                                                                                                                                                                                                                                                                                                      21-JUN-1999;

                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents a peptide derived from an eukaryotic Initiation Factor 4G (eIF4G) protein. The specification describes eIF4G and eIF4E binding agents, such as peptides or peptidemimetics. These binding agents are used for the induction of cell death. The binding peptides are used for inducing cell apoptosis. They are used in pharmaceutical compositions for anticancer or antitumor treatment of mammalian cells. Specifically, the peptides result in growth inhibition of, or increased cytotoxicity to tumour cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Use of eukaryotic Initiation Factor 4E (elF4E) binding agents e.g. binding peptide (elF4E-BP) derivatives as anticancer or antitumor \varepsilon for inducing apoptosis in e.g. mammalian tumor cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Triticum sp

and eIF4E binding agents, such as peptides or peptidemimetics. These binding agents are used for the induction of cell death. The binding peptides are used for inducing cell apoptosis. They are used in pharmaceutical compositions for anticancer or antitumor treatment of mammalian cells. Specifically, the peptides result in growth inhibition of, or increased cytoctoxicity to tumour cells. note: the peptide is biotinylated and linked to penetratin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel non-human transgenic animal (I) whose compared cells and somatic cells contain a knockout mutation in DNA encoding A 4E-BP1 (a member of eukaryotic initiation factor 4E (eIF-4E)-binding protein 1) shows a phenotype of an altered glucose and/or fat metabolism cells compared to a control animal. The products of the invention have antidiabetic and anorectic activity. The non-human transgenic animals are certified and associated diseases. The transgenic animals are certified useful as models for the investigation of light and glucose metabolism, cells useful for selection and identification of modulators of the certified and/or activity of 4E-BP1 and for screening drugs to isolate therapeutic agents which are useful as anti-obesity, anti-fat deposition cells and conserved demonstrates that an alteration of 4E-BP1 in the cells conserved demonstrates that an alteration of 4E-BP1 in the cells conserved demonstrates that an alteration of 4E-BP1 in the cells conserved demonstrates that an alteration of 4E-BP1 in the cells conserved demonstrates that an alteration of 4E-BP1 in the cells conserved demonstrates that an alteration of 4E-BP1 in the cells conserved demonstrates that an alteration of 4E-BP1 can modulate fat conserved demonstrates that an alteration of 4E-BP1 can modulate fat conserved demonstrates that an alteration of 4E-BP1 can modulate fat conserved demonstrates that an alteration of 4E-BP1 can modulate fat conserved demonstrates that an alteration of 4E-BP1 can modulate fat conserved demonstrates that an alteration of 4E-BP1 can modulate fat conserved demonstrates that an alteration of 4E-BP1 can modulate fat conserved demonstrates that an alteration of 4E-BP1 can modulate fat conserved demonstrates that an alteration of 4E-BP1 can modulate fat conserved demonstrates that an alteration of 4E-BP1 can modulate fat conserved demonstrates that an alteration of 4E-BP1 can modulate fat conserved demonstrates that an alteration of 4E-BP1 can modulate fat conserved demonstrates tha
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

The effects of 4E-BP1 are strictly dependent on its ability to sequester the translation initiation factor elf4E, thereby preventing its assembly into an active pre-initiation complex. The specification describes a method for inducing apoptosis in a cell in which the apoptosis pathway is inhibited. The method comprises decreasing the amount of elf4F pre-initiation complex by sequestration of elf4E, thus relieving an apoptosis block. The method is useful for modulating pro-apoptotic and anti-apoptotic pathways in cells, especially in Ras-transformed cells. Thus, the method is particularly useful for treating cancer. The elf4E sequestering agent, 4E-BP1 or its elf4E binding portion is useful for treating high proliferative cells
                                                                                                                                                                                                                                                                                                                                                                                                                  plant; transgenic; cold tolerance; growth rate; drought tolerance; disease resistance; galactomannan production; heat tolerance; herbicide tolerance; lignin production; extreme osmotic condition tolerance; pathogens resistance; pest resistance; yield improvement; seed oil yield; seed protein yield.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC sequences is derived from which organism. Also included is a method of plant with a recombinant DNA construct comprising transforming a CC plant with a recombinant DNA construct comprising promoter region CC functional in a plant cell operably joined to a polynucleotide encoding a CC plant. The property is selected from improving plant cold tolerance, for cC manipulating growth rate in plant cells by modification of the cell cycle cells pathway, for improving plant drought tolerance, for cC manipulating growth rate in plant drought tolerance, for providing increased cc resistance to plant disease, for improving plant tolerance, for improving plant tolerance, for improving plant tolerance to pare disease, for improving plant tolerance, for improving plant tolerance to pathogons or pests, for improving plant tolerance to extreme osmotic conditions, for improving plant tolerance to pathogons or pests, for yield improvement by modification of colerance to pathogons or pests, for yield improvement by modification of colerance to pathogons or pests, for yield improvement by modification of carbohydrate, nitrogen or phosphorus use and/or uptake can dror yield improvement by routing improved plant transcription factor. The methods and compositions of the present invention are useful in the field of biohemistry and compositions of converses of inparticular for producing transgenic plants with improved biological characteristics such as increased yield, improved nitrogen of molecules, plant breading markers, computer-based in physical colerance to plant pests or pathogens. They can also be used in physical colerance to plant pests or pathogens. They can also be used in physical colerance of molecules, plant breading markers, computer-based storage and concernance to premate directly from Sprio at was obtained in electronic format directly from Sprio callacation, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    encoding a cell proliferation-related polypeptide. The nucleic acid molecule and the encoded polypeptide, and methods are useful for modulating cell proliferation, senescence, differentiation, developmen and stress response in plants, and for producing enhanced food crops. present sequence represents a cell proliferation-related polypeptide. present sequence is published separately from the main body of the
The invention comprises the amino acid and coding sequences of rice stress-related proteins. The DNA and protein sequences of the invention are useful for regulating and controlling plant maturation and development, including proliferation, senescence, disease-resistance, or
                                                                                                                     New isolated nucleic acids and proteins, useful for producing transgenic plants having improved properties, e.g. tolerance to pests, herbicides, or biotic or abiotic stresses, improved nutritional value, or increased
                                                                                                                                                                                                                                                                                                                                                                                                                                  rice; stress-related protein; plant maturation; plant development; plant proliferation; plant senescence; plant disease-resistance; plant stress response; transgenic plant; pest tolerance; herbicide tolerance; biotic stress tolerance; abiotic stress tolerance; improved nutritional value; increased yield; increased proliferation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Rice stress-related protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ঠ
                        The invention relates to novel abiotic stress responsive polynucleotides and polypeptides. Also disclosed are vectors, expression cassettes, host cells, and plants containing such polynucleotides. Also disclosed are methods for using the polynucleotides and polypeptides to alter the responsiveness of a plant to abiotic stress. The invention is useful in agriculture. The nucleic acid is useful for determining whether a test collant has been exposed to an abiotic stress condition. It is also useful for selecting an agent that alters abiotic stress regulated polynucleotide expression in a plant cell, and to identify a homolog or ortholog to an abiotic stress responsive polynucleotide. The nucleic acid molecule and the polypeptide encoded by it are useful in altering the responsiveness of a plant to an abiotic stress, such as cold stress, salt stress, osmotic stress or any of their combinations. The present sequence is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             stress response. They are also useful for producing transgenic plants having improved properties, e.g. tolerance to pests, herbicides, or blotic stresses, improved nutritional value, increased yield or proliferation, or improved structure causing less loss from lodging or shattering. The present amino acid sequence represents a rice stress-related protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Oryza sativa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              abiotic stress
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Rice abiotic stress responsive polypeptide SEQ ID NO:7604

                                                                                             This invention describes a novel non-human transgenic animal (I) whose Germ cells and somatic cells contain a knockout mutation in DNA encoding A 4E-BP1 (a member of eukaryotic initiation factor 4E (eIF-4E)-binding (C protein 1) shows a phenotype of an altered glucose and/or fat metabolism (C when compared to a control animal. The products of the invention have antidiabetic and anorectic activity. The non-human transgenic animals are (C useful as models for the investigation of lipid and glucose metabolism, (C energy homeostasis and associated diseases The transgenic animals are (C also useful for selection and identification of modulators of the carpression and/or activity of 4E-BP1 and for screening drugs to isolate (therapeutic agents which are useful as anti-obesity, anti-fat deposition (C disorder, anti-diabetes and anti-metabolic diseases associated with fat deposition disorders. The effect of the disruption of 4E-BP1 in the knockout mice demonstrates that an alteration of 4E-BP1 can modulate fat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                AAB84401-15 represent 4E-binding sites. 4E-binding protein 1 (4E-BP1) is Ca repressor of cap-dependent translation initiation, and selectively activates appotosis in Ras-transformed fibroblasts and elhminates Ras-induced chemoresistance. The effects of 4E-BP1 are strictly dependent on its ability to sequester the translation initiation factor elF4E, thereby preventing its assembly into an active pre-initiation complex. The specification describes a method for inducing apoptosis in a cell in which the apoptosis pathway is inhibited. The method comprises decreasing the amount of elF4E pre-initiation complex by sequestration of elF4E, thus relieving an apoptosis block. The method is useful for modulating pro-apoptotic and anti-apoptotic pathways in cells, especially in Rastransformed cells. Thus, the method is particularly useful for treating cancer. The elF4E sequestering agent, 4E-BP1 or its elF4E binding portion is useful for treating high proliferative cells

                                                                                                        გ
                                                                                                                                                                                                                                                                           The invention describes a recombinant DNA construct comprising a conjunct consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at the sequence encoding an amino acid sequence ftp. seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for mproving plant tolerance to cold, heat, drought, herbicides, extreme commotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring conformation in plant disease, for producing galactomannan, conformation in plants, for improving yield by modification of plant growth regulators, for increasing the rate of homologous crecombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake cor by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This is the amino acid sequence of a plant full length insert complypeptide that can be used in the recombinant DNA construct of the
                                                                                                                                                Query Match

   Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                     Score

1- FUNCTION: Functions in close association with EIF4B
ATP-despendent RNA-unwinding.
-I- MISCELLANEOUS: In higher plants two isoforms of EIF4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MEDLINE=93054655; PubMed=1385417;
